

About

Case Protocol is an RPC API built specially for Solana ecosystem. Being pretty new and developing network, each day Solana requires more and more efficient instruments for builders.

Solution

There is no need to purchase costly hardware or rent servers to be able to build and run your Solana based applications. Case Protocol was created to help developers with establishing a simple, fast and reliable connection with Solana blockchain.

Solution

CASE protocol gives possibility to control your interactions with Solana through the personal dashboard, from creating a unique RPC address to controlling your daily requests.

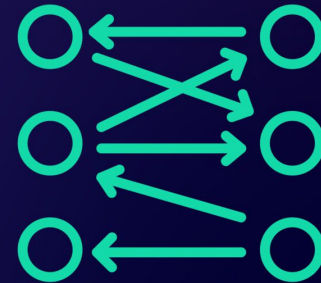

Built for developers

Want to test or run your application on Solana?
CASE Protocol is the best decision if you are
used to perfect requests timing and scalability.

Connection through a
dashboard with private key

100,000 requests per day

Key points

User friendly

All interactions
through the
dashboard

Simple

Connect to
our RPC in a
few clicks

Fast

1,500 per
second

Scalable

Increase
quantity of
requests

Cost effective

No need to set
and maintain
full node
